

Postdoctoral Scholar positions available at University of California, Davis Medical Center

Postdoctoral research positions are available in the Department of Surgery to investigate the signaling and molecular control of endothelial cell-cell and cell-matrix interactions in regulating vascular permeability during inflammation, trauma, and diabetes. Current research approaches include various animal/cell models of disease and injury, intravital microscopy, isolated microvessels, 3D fluorescence imaging, FRET, protein biochemistry, and state-of-the-art molecular biology techniques. Require doctoral degree in related areas. Experience in vascular physiology, cell biology, protein chemistry, or microscopic imaging is preferred.
